

Clean Energy

### Gulfstream

Technologies has developed and is marketing a unique technology for producing clean renewable energy by harvesting power from any one directional water flow source. Our subsurface "GreenFlow Turbines" utilize the flow of water to produce electricity that is very efficient and environmentally

safe. Gulfstream Technologies'

"GreenFlow Turbines" can

be custom configured to a specific site

location with a client-flexible, tailor fit

solution in size and kilowatt (kW) output to accommodate the needs of our customers.

Environment Friendly

Innovative

Harvest Wasted Opportunities

Developer of

**GreenFlow** Turbines

## **Harnessing the Opportunity**

Gulfstream Technologies' plan is to commercialize and successfully operate the most advanced renewable subsurface energy technology in the market by utilizing 21st century technology, coupled with a diverse team of synergistic employees and strategic partners.

## **Values**

Gulfstream Technologies wants to provide a clean and safe environment inheritance for generations to come by offering a solution for today that provides us with a brighter tomorrow.
